SUBPROJECT:	<u>8</u>	STUDY NAME:	<u>Big Game Population Trends,</u>
STUDY:	<u>I</u>		<u>Utilization, and Associated</u>
JOB:	<u>10</u>		<u>Habitat Studies</u>
PERIOD COVERED:	<u>July 1, 1997 to June 30, 1998</u>		

ABSTRACT

In 1997, the annual telephone survey was contracted to a private vendor for the fifth year in a row. The purpose of this action was to increase the quality and enhance the objectivity of the survey. A new contract was signed with Clearwater Research, Inc. in 1996 for the 1996 and 1997 hunting seasons. Increasing costs of conducting the telephone harvest survey and budget limitations resulted in moose, mountain goats, and bighorn sheep being eliminated from this harvest survey program in 1996. In further consideration of rising costs and budget limitations, the survey was further reduced to include only 3 key species (deer, elk, and antelope) to maximize information collected on harvest of these species in 1997.

Many management criteria in the current species management plans are related to hunter harvest and activity. Hunters were contacted by telephone on this survey and questioned about their hunting activity and harvest (Appendix A). Over 39,000 hunters were contacted from January 1998 to April 1998, an increase of over 156% of the number of hunters contacted for the 1996 hunting season.

INTRODUCTION

For the 1997 hunting season, under private contract, a targeted telephone survey was conducted following each hunting season of deer, elk, and antelope controlled hunt participants and general season deer and elk tag buyers. Unlike previous years in which Clearwater Research conducted the survey, collected the responses, and analyzed the data, in 1997 Clearwater Research only conducted the survey and delivered the raw data file to the Department. The analysis and tabulation was performed internally.

For the 1997 hunting season, controlled hunts for deer, elk, and antelope were sampled at a rate of 100% for hunts with ≤ 50 permits, or 50 completed interviews plus 11% of the number of permits in excess of 50 for those hunts with > 50 permits. There were 15,854 contacts completed for the controlled hunt segment.

The contractor was to survey general deer and elk tag holders at a rate of about 10 percent of the total number of tags issued for each species. Approximately 8,900 general season elk hunters

and 14,700 general season deer hunters were surveyed by telephone. No telephone survey was conducted for black bear, mountain lion, or general season archery antelope hunters in 1997.

ACKNOWLEDGMENTS

This survey was partially supported by Federal Aid in Wildlife Restoration (W-170-R) Statewide Big Game Harvest Survey. The 1997 telephone survey was conducted by Clearwater Research, Inc., Boise, Idaho, under contract from the Idaho Department of Fish and Game.

APPENDIX A

Summary of
1997
Big Game
Harvest Estimates

Species	Estimated		
	Hunters	Harvest	Days hunted
Deer	154,500	38,600	956,700
Elk	96,700	18,500	759,700
Antelope (controlled hunts only)	2,150	1,300	7,200

By Lonk Kuck and Jon Rachel
Idaho Department of Fish and Game

Boise, Idaho 83707

Appendix Table 1. Statewide estimates of harvest, number of hunters, and activity for 1997.

Species	Season	Hunters	Harvest	Success (%)	Days hunted
Deer	General	143,400	31,200	22	762,500
	Archery	19,300	1,100	6	118,400
	Muzzleloader	4,800	500	5	21,600
	Controlled	11,100	5,800	52	54,200
	Total ^a	154,500	38,600	25	956,700
Elk	General	66,500	8,000	12	430,000
	Archery	17,000	1,200	7	131,000
	Muzzleloader	3,200	150	4	15,300
	Controlled	30,200	9,200	31	183,400
	Total ^a	96,700	18,500	19	759,700
Antelope	Archery ^b				
	Controlled	2,150	1,300	59	7,200
	Total ^b	2,150	1,300	59	7,200

^a Because most hunters who participate in special weapons seasons also participate in the general season, the number of individual hunters is best represented by the sum of the general season and controlled hunt hunters.

^b No survey was attempted to estimate participation or harvest of antelope during the general archery season in 1997.

Appendix Table 2. Big game harvest history, 1935-present.

1993	45,600	20,800	2,470	1,260	450	579	80	66
1994	56,900	28,000	1,835	2,250	450	558	78	69
1995	48,400	22,400	1,540	2,040	700	637	57	44
1996	50,800	25,600	1,460	1,740	450	^a	^a	^a
1997	38,600	18,500	^b 1,300	^c	^c	^a	^a	^a

^a Because of budget shortfalls and increasing costs of conducting the telephone harvest survey, moose, bighorn sheep, and mountain goats were eliminated from the survey in 1996. Harvest figures for these species were estimated based on a mandatory check requirement and were funded through a different project.

^b Harvest estimate does not include antelope harvest during the general archery season.

^c Black bear and mountain lions were dropped from the survey program in 1997 because of budget restrictions.

GAME MANAGEMENT UNITS

FEDERAL AID IN WILDLIFE RESTORATION

The Federal Aid in Wildlife Restoration Program consists of funds from a 10% to 11% manufacturer's excise tax collected from the sale of handguns, sporting rifles, shotguns, ammunition, and archery equipment. The Federal Aid program then allots the funds back to states through a formula based on each state's geographic area and the number of paid hunting license holders in the state. The Idaho Department of Fish and Game uses the funds to help restore, conserve, manage, and enhance wild birds and mammals for the public benefit. These funds are also used to educate hunters to develop the skills, knowledge, and attitudes necessary to be responsible, ethical hunters. Seventy-five percent of the funds for this project are from Federal Aid. The other 25% comes from license-generated funds.
